Understanding the Purpose of a Letter of Support for Medicaid

A letter of support for Medicaid acts as a formal endorsement, providing crucial information and affirmation to Medicaid administrators or review boards. Its primary purpose is to strengthen an application, appeal, or specific request by offering an objective and credible third-party perspective. This document can elucidate the unique circumstances of an applicant, highlight the medical necessity of a requested service, or demonstrate the positive impact of a particular program on Medicaid beneficiaries. Essentially, it bridges gaps in understanding and provides evidence that complements official documentation, making a compelling case for approval or continued eligibility. The weight of a well-written letter of support can be substantial in influencing decisions within the often

intricate Medicaid system.

Who Needs a Letter of Support for Medicaid?

The need for a letter of support for Medicaid can arise in a variety of situations, impacting individuals, families, and healthcare providers alike. These letters are not universally required but become indispensable when specific circumstances need further clarification or validation.

Understanding who might benefit from such documentation can help individuals and organizations proactively prepare for potential requirements. These documents often serve to bridge information gaps or to lend credibility to claims made within an application or appeal process.

Individuals and Families

Individuals applying for Medicaid, particularly those with complex medical needs or unique financial situations, may require a letter of support to clarify their circumstances. For instance, if an applicant relies on a caregiver not formally employed, a letter from that caregiver or a healthcare professional attesting to the necessity of their services can be invaluable. Similarly, families seeking coverage for specialized therapies or equipment not typically standard might need letters from physicians or therapists to demonstrate medical necessity and the lack of viable alternatives. This can also extend to individuals transitioning between states or reapplying after a period of ineligibility where prior circumstances need re-explanation.

Healthcare Providers and Facilities

Healthcare providers, such as doctors, specialists, and hospitals, frequently write letters of support for their patients' Medicaid applications or service authorizations. These letters are crucial for substantiating the medical necessity of prescribed treatments, medications, durable medical equipment, or home healthcare services. A physician's detailed explanation of why a particular intervention is critical for a patient's health and well-being, and why cheaper or simpler alternatives are not suitable, can be a deciding factor. Similarly, facilities might provide letters to demonstrate their capacity to deliver necessary care or to justify the need for specific program expansions funded through Medicaid.

Community Organizations and Advocacy Groups

Non-profit organizations, social service agencies, and advocacy groups often

provide letters of support for individuals or programs interacting with Medicaid. These entities can attest to an individual's commitment to managing their health, their community's need for specific Medicaid-funded services (like mental health clinics or substance abuse treatment centers), or the positive social impact of a Medicaid initiative. Their support can lend credibility by showcasing a broader understanding of the applicant's or program's context and its alignment with community welfare goals.

Key Components of an Effective Letter of Support for Medicaid

To be effective, a letter of support for Medicaid must be clear, concise, and contain specific information that directly addresses the purpose of the letter. A well-structured letter not only lends credibility but also makes it easier for Medicaid reviewers to understand and process the information. The absence of these key elements can weaken the overall impact of the document.

Clear Identification

The letter must clearly identify the sender, the recipient, and the subject. This includes the full name and contact information of the writer (e.g., doctor's name, clinic address, phone number), the name and relevant ID number of the Medicaid applicant or recipient, and the specific Medicaid program or service being discussed. A clear subject line stating the purpose, such as "Letter of Support for [Applicant Name] - Home Health Services," is crucial.

Statement of Relationship and Purpose

The letter should explicitly state the sender's relationship to the applicant or the situation. For example, a physician would state they are the patient's treating physician. The letter must then clearly articulate its purpose – why it is being written and what support it aims to provide. This could be to confirm medical necessity, vouch for eligibility criteria, or advocate for a specific treatment plan.

Detailed and Specific Information

Vague statements are unhelpful. The letter needs to provide specific details that support the case. If advocating for medical necessity, this includes citing the diagnosis, the recommended treatment or service, the rationale behind the recommendation, and why it is essential for the patient's health.

and recovery. Quantifiable data, if available, can be particularly persuasive. For example, detailing the frequency of required visits or the duration of necessary equipment use.

Objective and Factual Tone

While the letter is supportive, it must maintain an objective and professional tone. It should present facts and clinical observations rather than emotional pleas. The language should be clear, direct, and free from jargon where possible, or explain any necessary medical terms. The focus should remain on the medical, functional, or programmatic aspects relevant to Medicaid eligibility and coverage.

Conclusion and Signature

A strong concluding statement that reiterates the support for the application or request is important. The letter must be signed by the author, and it is beneficial to include their professional title and affiliation. This adds authenticity and weight to the document.

Crafting a Strong Letter of Support: Step-by-Step

Writing an effective letter of support for Medicaid involves a systematic approach to ensure all necessary elements are included and presented in a compelling manner. Following a step-by-step process can help draft a document that is both professional and persuasive, increasing its likelihood of achieving its intended outcome.

Step 1: Understand the Specific Request

Before writing, thoroughly understand why the letter is needed. Is it for initial application, a service authorization, an appeal, or a program evaluation? Identify the specific Medicaid office or reviewer who will receive the letter and any particular requirements they might have for such documentation. Familiarize yourself with the relevant Medicaid policies or guidelines if possible.

Step 2: Gather Essential Information

Collect all pertinent details about the applicant or situation. This includes the applicant's full name, Medicaid ID number, date of birth, and the specific service or benefit in question. If the letter is from a healthcare provider, gather the patient's medical records, diagnosis, treatment history, and the detailed rationale for the recommended support.

Step 3: Structure the Letter Logically

Begin with a formal salutation addressed to the appropriate individual or department. Follow with an introduction that clearly states your identity, your relationship to the applicant, and the purpose of the letter. Dedicate the main body to providing specific, factual evidence supporting your position. Conclude with a summary of your support and a professional closing.

Step 4: Draft the Content with Precision

Write in clear, concise language. Avoid overly technical medical jargon unless it is explained. Focus on objectivity and present the information in a factual, evidence-based manner. Use strong, active verbs. Quantify where possible, such as the frequency of required care or the duration of a necessary treatment course. Ensure the letter directly addresses the criteria or concerns of the Medicaid reviewer.

Step 5: Review and Refine

Proofread the letter carefully for any grammatical errors, typos, or inconsistencies. Read it aloud to catch awkward phrasing. Ensure it flows logically and persuasively. It may be beneficial to have another qualified individual review the letter before it is sent. Verify that all required information, such as contact details and signatures, is present.

Common Scenarios Requiring a Letter of Support for Medicaid

Certain situations are more prone to requiring a letter of support for Medicaid due to their inherent complexity or the need for detailed justification. Recognizing these common scenarios can help individuals and providers anticipate when such documentation might be necessary and prepare

accordingly.

Medical Necessity for Specific Services

One of the most frequent reasons for a letter of support is to document the medical necessity of a particular service, medication, or piece of equipment. This is especially true for items or treatments that are considered non-standard, experimental, or require significant justification. A physician's letter explaining why a specific, expensive medication is crucial for managing a chronic condition and why generic alternatives are insufficient is a prime example. Similarly, letters may be needed to support requests for extensive home modifications, specialized therapy sessions beyond typical limits, or durable medical equipment like ventilators or specialized wheelchairs.

Eligibility for Home and Community-Based Services (HCBS)

For individuals seeking to receive long-term care services at home or in the community rather than in an institutional setting, letters of support can be vital. These letters, often from physicians, social workers, or case managers, can attest to the individual's functional limitations, their need for ongoing support, and their ability to thrive in a home environment with appropriate assistance. They help demonstrate that HCBS are a viable and often preferable alternative to institutionalization, aligning with Medicaid's goals of promoting person-centered care.

Appeals of Denied Claims or Services

When a Medicaid claim is denied or a requested service is not approved, a letter of support can be a crucial component of an appeal. This letter, often written by the treating physician or a specialist, can provide a more in-depth clinical explanation that may have been missing or misunderstood in the initial review. It can clarify the severity of the condition, the limitations imposed by the illness, and the critical role of the denied service in improving health outcomes or preventing further deterioration. This can also apply to appeals for eligibility or coverage of specific treatments deemed investigational.

Demonstrating Programmatic Need or Impact

Beyond individual cases, letters of support can be used to demonstrate the need for or the positive impact of Medicaid-funded programs or initiatives. For instance, a community health center might receive letters from local leaders or partner organizations attesting to the vital role the center plays in serving an underserved population. Similarly, a program designed to improve health literacy among a specific Medicaid beneficiary group might gather letters from participants detailing how the program has positively impacted their health management and engagement with the healthcare system.

Tips for Writing a Persuasive Letter of Support

Crafting a letter of support that effectively persuades Medicaid reviewers requires more than just stating facts; it involves strategic communication. Implementing these tips can significantly enhance the impact and effectiveness of your letter.

- **Be Specific and Detailed:** Avoid general statements. Provide concrete examples, diagnoses, treatment plans, and functional impacts.
- **Focus on Medical Necessity:** Clearly articulate why a service, treatment, or equipment is essential for the patient's health, safety, or functional ability.
- **Use Professional Language:** Maintain a formal, objective, and professional tone. Avoid emotional appeals, slang, or overly casual language.
- **Cite Evidence:** Reference specific medical guidelines, clinical literature, or personal observations that support your claims.
- **Quantify When Possible:** Use numbers to illustrate the extent of need, such as frequency of care, duration of symptoms, or functional limitations.
- **Explain Complexities Clearly:** If the situation is intricate, break it down into easily understandable components. Define any medical terms that might be unfamiliar to a non-medical reviewer.
- **Tailor to the Audience:** Understand who will be reading the letter and what information they are looking for. Address potential concerns or questions proactively.
- **Ensure Readability:** Use clear paragraph breaks and formatting. A well-organized letter is easier to read and digest.
- **Proofread Meticulously:** Errors in grammar or spelling can undermine credibility. Ensure the letter is polished and error-free.

What to Avoid in a Letter of Support for Medicaid

Just as knowing what to include is important, understanding what to omit or avoid in a letter of support for Medicaid is equally crucial for maintaining its integrity and effectiveness. Certain pitfalls can inadvertently weaken the document and hinder its intended purpose.

Emotional or Inflammatory Language

While empathy is understandable, letters of support should remain professional and objective. Avoid overly emotional appeals, accusations, or language that could be perceived as biased or demanding. Stick to factual observations and clinical justifications. Aggressive or pleading tones can be counterproductive.

Vague or Generic Statements

A letter filled with platitudes like "the patient needs this" or "this is very important" offers little value. Medicaid reviewers need specific information to make informed decisions. Generic statements do not provide the necessary evidence to justify a request or confirm eligibility. Each point should be substantiated with details.

Unsubstantiated Claims

Do not make claims that cannot be backed up with evidence. If you state a particular treatment is the only option, be prepared to explain why. If you assert a certain service is medically necessary, provide the diagnostic and functional reasons behind that assertion. Unsubstantiated claims can lead to skepticism and rejection.

Misleading Information or Exaggeration

Honesty and accuracy are paramount. Providing false or exaggerated information can have serious consequences, including denial of services, potential legal issues, and damage to the credibility of the writer and applicant. Stick strictly to the facts and present them truthfully.

Irrelevant Information

Keep the letter focused on the specific purpose for which it is being written. Including personal anecdotes that are not directly relevant to the Medicaid application or service request, or details about unrelated medical conditions, can distract the reviewer and dilute the main message. Every sentence should serve a clear purpose in supporting the case.

Lack of Professionalism

A poorly formatted letter, one rife with grammatical errors, or one that lacks essential identifying information (like contact details or signatures) can appear unprofessional. This can create a negative impression and suggest a lack of seriousness or attention to detail, potentially undermining the credibility of the support being offered.

Frequently Asked Questions

What is a letter of support for Medicaid, and why is it important?

A letter of support for Medicaid is a document written by an individual or organization that vouches for an applicant's eligibility or need for Medicaid services. It can be crucial because it provides additional evidence and credibility to the application, potentially influencing the decision-making process, especially in cases with complex circumstances or when documentation is limited.

Who can write a letter of support for a Medicaid application?

A variety of individuals and organizations can write a letter of support, including healthcare providers (doctors, nurses, therapists), social workers, case managers, community leaders, religious figures, family members, friends, or representatives from non-profit organizations that assist with healthcare access. The key is that the writer has direct knowledge of the applicant's situation.

What information should be included in a strong letter of support for Medicaid?

A strong letter of support should clearly identify the writer and their relationship to the applicant. It should detail the applicant's specific

needs, why they qualify for Medicaid, and how the program will benefit them. Including details about the applicant's financial situation, health conditions, living situation, or any barriers to accessing care can be very impactful.

When is a letter of support particularly beneficial for a Medicaid application?

Letters of support are particularly beneficial when an applicant faces unique challenges, such as being unhoused, experiencing a sudden loss of income, having a complex medical condition requiring extensive treatment, or if there are inconsistencies in their documentation that need further explanation. They can also help in cases of appeals or reviews.

Can a family member write a letter of support for a Medicaid application?

Yes, a family member can write a letter of support, provided they can offer relevant information about the applicant's circumstances and needs. However, the letter might carry more weight if it's from a third party who is not directly benefiting financially from the applicant's Medicaid coverage.

How does a letter of support differ from a doctor's note for Medicaid?

A doctor's note primarily focuses on medical necessity and a diagnosis, explaining why specific medical services are required. A letter of support is broader; it can corroborate the applicant's financial situation, living conditions, social support, and overall need for Medicaid, often complementing the medical information provided by a doctor.

Where can I find examples or templates for a Medicaid letter of support?

You can often find examples or templates for Medicaid letters of support through state Medicaid agency websites, legal aid organizations, non-profit groups that assist with healthcare enrollment, or by searching online for 'Medicaid letter of support template' and specifying your state if possible. Remember to adapt any template to the applicant's specific situation.

What is the impact of a letter of support on a Medicaid application's approval?

While a letter of support is not a guarantee of approval, it can significantly strengthen an application by providing context and personal testimony that documentation alone may not convey. It can help caseworkers understand the applicant's situation more holistically, potentially leading

to a favorable decision, especially in borderline or complex cases.

letter of support for medicaid: **Key Capabilities of an Electronic Health Record System** Institute of Medicine, Board on Health Care Services, Committee on Data Standards for Patient Safety, 2003-07-31 Commissioned by the Department of Health and Human Services, Key Capabilities of an Electronic Health Record System provides guidance on the most significant care delivery-related capabilities of electronic health record (EHR) systems. There is a great deal of interest in both the public and private sectors in encouraging all health care providers to migrate from paper-based health records to a system that stores health information electronically and employs computer-aided decision support systems. In part, this interest is due to a growing recognition that a stronger information technology infrastructure is integral to addressing national concerns such as the need to improve the safety and the quality of health care, rising health care costs, and matters of homeland security related to the health sector. Key Capabilities of an Electronic Health Record System provides a set of basic functionalities that an EHR system must employ to promote patient safety, including detailed patient data (e.g., diagnoses, allergies, laboratory results), as well as decision-support capabilities (e.g., the ability to alert providers to potential drug-drug interactions). The book examines care delivery functions, such as database management and the use of health care data standards to better advance the safety, quality, and efficiency of health care in the United States.

The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic,

with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

letter of support for medicaid: Birth Settings in America National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Assessing Health Outcomes by Birth Settings, 2020-05-01 The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

letter of support for medicaid: Families Caring for an Aging America National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Family Caregiving for Older Adults, 2016-12-08 Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

letter of support for medicaid: The Future of Nursing 2020-2030 National Academies of Sciences Engineering and Medicine, Committee on the Future of Nursing 2020-2030, 2021-09-30
The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

letter of support for medicaid: Grandparenting Children with Disabilities Madonna Harrington Meyer, Ynesse Abdul-Malak, 2020-08-29 Childhood disabilities, particularly cognitive disabilities, are on the rise yet social programs and services to help US families respond to disabilities are not. Many families turn to grandparents for assistance juggling work, family responsibilities, and specialized therapies. This book is based on in-depth interviews with grandparents who are providing at least some care to grandchildren with disabilities. The analyses will help to better understand (1) under what conditions grandparents provide care and support, (2) what types and intensities of care and support grandparents provide, and (3) the impact of that care and support on grandparents' social, emotional, physical, and financial wellbeing. In this fascinating and provocative book, Madonna Harrington Meyer and Ynesse Abdul-Malak take readers on a deep dive into the complex lives of grandparents who care for their disabled grandchildren. In Grandparenting Children with Disabilities, their interviews reveal the joy, meaning, and purpose grandparents find in caregiving, the challenges and frustrations they encounter, and the many ways they compromise their own health and well-being for the sake of their grandchildren. Drawing from theories of cumulative inequality and from their deep knowledge of the US policy context, the authors lay bare the systemic failures that leave families of children with disabilities without adequate support and that place the most vulnerable among them at grave physical, emotional, and financial risk... Jane McLeod, Provost Professor, Indiana University Grandparents in the U.S. already take on far more parenting responsibilities as compared to their peers in other countries. Grandparenting Children with Disabilities demonstrates that the intensity of these responsibilities is compounded for those whose grandchildren have disabilities given limited policy supports and a

society still largely unaccommodating to those with disabilities. This book beautifully navigates the tension between the love these grandparents have for their grandchildren and the challenges they face caring for them. Pamela Herd, Professor, Georgetown University Grandparenting Children with Disabilities offers important insights about the lived experience of older adults who care for and care about their grandchildren...The authors skillfully integrate the stories they tell with consideration of macro social structural influences and life course perspectives... I recommend it highly! Eva Kahana, Distinguished University Professor, Case Western Reserve

letter of support for medicaid: Assessing Genetic Risks Institute of Medicine, Committee on Assessing Genetic Risks, 1994-01-01 Raising hopes for disease treatment and prevention, but also the specter of discrimination and designer genes, genetic testing is potentially one of the most socially explosive developments of our time. This book presents a current assessment of this rapidly evolving field, offering principles for actions and research and recommendations on key issues in genetic testing and screening. Advantages of early genetic knowledge are balanced with issues associated with such knowledge: availability of treatment, privacy and discrimination, personal decision-making, public health objectives, cost, and more. Among the important issues covered: Quality control in genetic testing. Appropriate roles for public agencies, private health practitioners, and laboratories. Value-neutral education and counseling for persons considering testing. Use of test results in insurance, employment, and other settings.

letter of support for medicaid: The Future of the Public's Health in the 21st Century Institute of Medicine, Board on Health Promotion and Disease Prevention, Committee on Assuring the Health of the Public in the 21st Century, 2003-02-01 The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

letter of support for medicaid: Registries for Evaluating Patient Outcomes Agency for Healthcare Research and Quality/AHRQ, 2014-04-01 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an

organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

letter of support for medicaid: The Promise of Assistive Technology to Enhance Activity and Work Participation National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on the Use of Selected Assistive Products and Technologies in Eliminating or Reducing the Effects of Impairments, 2017-09-01 The U.S. Census Bureau has reported that 56.7 million Americans had some type of disability in 2010, which represents 18.7 percent of the civilian noninstitutionalized population included in the 2010 Survey of Income and Program Participation. The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. As of December 2015, approximately 11 million individuals were SSDI beneficiaries, and about 8 million were SSI beneficiaries. SSA currently considers assistive devices in the nonmedical and medical areas of its program guidelines. During determinations of substantial gainful activity and income eligibility for SSI benefits, the reasonable cost of items, devices, or services applicants need to enable them to work with their impairment is subtracted from eligible earnings, even if those items or services are used for activities of daily living in addition to work. In addition, SSA considers assistive devices in its medical disability determination process and assessment of work capacity. The Promise of Assistive Technology to Enhance Activity and Work Participation provides an analysis of selected assistive products and technologies, including wheeled and seated mobility devices, upper-extremity prostheses, and products and technologies selected by the committee that pertain to hearing and to communication and speech in adults.

letter of support for medicaid: Mismanaged Money in American Healthcare Lisa Famiglietti, Mark Scott, 2023-09-01 Warren Buffett famously invoked the metaphor of a tapeworm when describing what healthcare is to the American economy. The United States spends approximately 20% of its gross national product on healthcare, but it is unclear where the money goes or who is minding the store. This healthcare crisis is mostly about money--not lack of money, but rather misspending of money. From the perspective of a healthcare auditor and provider, this work describes the problems of American healthcare finance and proposes solutions. Extensive charts and graphs are used to trace where money goes in the American healthcare system, while other topics such as ethics in healthcare billing, un-auditable hospital costs and scams are discussed. There is evidence that clearly identifies where the money goes, and its destination may surprise the reader.

letter of support for medicaid: Major Labels Kelefa Sanneh, 2021-10-05 One of Oprah Daily's 20 Favorite Books of 2021 • Selected as one of Pitchfork's Best Music Books of the Year "One of the best books of its kind in decades." —The Wall Street Journal An epic achievement and a huge delight, the entire history of popular music over the past fifty years refracted through the big genres that have defined and dominated it: rock, R&B, country, punk, hip-hop, dance music, and pop Kelefa Sanneh, one of the essential voices of our time on music and culture, has made a deep study of how popular music unites and divides us, charting the way genres become communities. In *Major Labels*, Sanneh distills a career's worth of knowledge about music and musicians into a brilliant and omnivorous reckoning with popular music—as an art form (actually, a bunch of art forms), as a cultural and economic force, and as a tool that we use to build our identities. He explains the history of slow jams, the genius of Shania Twain, and why rappers are always getting in trouble. Sanneh shows how these genres have been defined by the tension between mainstream and outsider, between authenticity and phoniness, between good and bad, right and wrong. Throughout, race is a powerful touchstone: just as there have always been Black audiences and white audiences, with more or less overlap depending on the moment, there has been Black music and white music, constantly mixing and separating. Sanneh debunks cherished myths, reappraises beloved heroes, and upends familiar ideas of musical greatness, arguing that sometimes, the best popular music isn't transcendent. Songs express our grudges as well as our hopes, and they are motivated by greed as well as idealism; music is a powerful tool for human connection, but also for human antagonism. This is a book about the music everyone loves, the music everyone hates, and the decades-long argument over which is which. The opposite of a modest proposal, *Major Labels* pays in full.

letter of support for medicaid: Occupational Therapy Practice Framework: Domain and Process Aota, 2014 As occupational therapy celebrates its centennial in 2017, attention returns to the profession's founding belief in the value of therapeutic occupations as a way to remediate illness and maintain health. The founders emphasized the importance of establishing a therapeutic relationship with each client and designing an intervention plan based on the knowledge about a client's context and environment, values, goals, and needs. Using today's lexicon, the profession's founders proposed a vision for the profession that was occupation based, client centered, and evidence based--the vision articulated in the third edition of the Occupational Therapy Practice Framework: Domain and Process. The Framework is a must-have official document from the American Occupational Therapy Association. Intended for occupational therapy practitioners and students, other health care professionals, educators, researchers, payers, and consumers, the Framework summarizes the interrelated constructs that describe occupational therapy practice. In addition to the creation of a new preface to set the tone for the work, this new edition includes the following highlights: a redefinition of the overarching statement describing occupational therapy's domain; a new definition of clients that includes persons, groups, and populations; further delineation of the profession's relationship to organizations; inclusion of activity demands as part of the process; and even more up-to-date analysis and guidance for today's occupational therapy practitioners. Achieving health, well-being, and participation in life through engagement in occupation is the overarching statement that describes the domain and process of occupational therapy in the fullest sense. The Framework can provide the structure and guidance that practitioners can use to meet this important goal.

letter of support for medicaid: Reproducing Race Khiara Bridges, 2011-03-18 *Reproducing Race*, an ethnography of pregnancy and birth at a large New York City public hospital, explores the role of race in the medical setting. Khiara M. Bridges investigates how race—commonly seen as biological in the medical world—is socially constructed among women dependent on the public healthcare system for prenatal care and childbirth. Bridges argues that race carries powerful material consequences for these women even when it is not explicitly named, showing how they are marginalized by the practices and assumptions of the clinic staff. Deftly weaving ethnographic evidence into broader discussions of Medicaid and racial disparities in infant and maternal mortality, Bridges shines new light on the politics of healthcare for the poor, demonstrating how the medicalization of social problems reproduces racial stereotypes and governs the bodies of poor women of color.
