pearl harbor apprenticeship program: *Warship Builders* Thomas Heinrich, 2020-11-15
Warship Builders is the first scholarly study of the U.S. naval shipbuilding industry from the early 1920s to the end of World War II, when American shipyards produced the world's largest fleet that helped defeat the Axis powers in all corners of the globe. A colossal endeavor that absorbed billions and employed virtual armies of skilled workers, naval construction mobilized the nation's leading industrial enterprises in the shipbuilding, engineering, and steel industries to deliver warships whose technical complexity dwarfed that of any other weapons platform. Based on systematic comparisons with British, Japanese, and German naval construction, Thomas Heinrich pinpoints the distinct features of American shipbuilding methods, technology development, and management practices that enabled U.S. yards to vastly outproduce their foreign counterparts. Throughout the book, comparative analyses reveal differences and similarities in American, British, Japanese, and German naval construction. Heinrich shows that U.S. and German shipyards introduced electric arc welding and prefabrication methods to a far greater extent than their British and Japanese counterparts between the wars, laying the groundwork for their impressive production records in World War II. While the American and Japanese navies relied heavily on government-owned navy yards, the British and German navies had most of their combatants built in corporately-owned yards, contradicting the widespread notion that only U.S. industrial mobilization depended on private enterprise. Lastly, the U.S. government's investments into shipbuilding facilities in both private and government-owned shipyards dwarfed the sums British, Japanese, and German counterparts expended. This enabled American builders to deliver a vast fleet that played a pivotal role in global naval combat.

Within weeks, France sought to reestablish colonial rule. American merchant seamen arriving in French ports to ship GIs back to the U.S. were dismayed when French troops bound for Vietnam came aboard instead. Many of these seamen objected because American veterans awaited transport home and because they flew in the face of Allied war aims of national self-determination. Later, with the Vietnam War effort dependent on Merchant Marine logistical support, seamen were among the first to protest U.S. involvement. With firsthand recollections, this book tells the story, from deadly encounters with mines, rockets and gunfire to evacuations of refugees and to rescues of boat people in the South China Sea.
