toronto notes 2023: A Map to the Door of No Return Dionne Brand, 2024-10-01 Now in its first American edition, Dionne Brand's groundbreaking *A Map to the Door of No Return* has emerged as a modern classic, a highly influential exploration of "being" in the Black Diaspora. Since its first

publication in 2001, Dionne Brand's groundbreaking exploration of being in the Black Diaspora, *A Map to the Door of No Return*, has emerged as a modern classic. The door, in Brand's iconic schema, represents the point of rupture where the ancestors of the Black Diaspora departed one world for another: the place where all names were forgotten, and all beginnings recast. "This door," writes Brand, "is not mere physicality. It is a spiritual location . . . Since leaving was never voluntary, return was, and still may be, an intention, however deeply buried. There is as it says no way in; no return." Through shards of history, memoir, lyrical investigation, and the unwritten experience of so many descendants of those who passed through the door, Brand constructs a map of this indelible region, culminating in an enduring expression, both definitive and seeking, of what it is to live, think, and create in the wake of colonization. With a new preface by the author, and an afterword by Saidiya Hartman.

The decision to stop dating has made Vaughn Hargrave's life infinitely simpler: he has friends, an excellent wardrobe, and a job in the industry he loves. That's all he really needs, especially since sex isn't his forte anyway and no one else seems interested in a purely romantic connection. But when a piece is stolen from his art gallery and insurance investigator Jonah Sondern shows up, Vaughn finds himself struggling with that decision. Jonah wants his men like his coffee: hot, intense, and daily. But Vaughn seems to be the one gay guy in Toronto who doesn't do hookups, which is all Jonah can offer. toronto notes 2023: *Field Notes from a Pandemic* Ethan Lou, 2020-09-29 A CBC Best Canadian

Nonfiction Book of 2020 In a book equal parts travelogue and pandemic guide, the journalist Ethan Lou examines the societal effects of COVID-19 and takes us on a mesmerizing journey around a world that will never be the same. Visiting Beijing in January 2020 to see his dying grandfather, the Canadian journalist Ethan Lou unknowingly walks into a state under siege. In his journey out of China and—unwittingly—into other hot zones in Asia and Europe, he finds himself witnessing the very earliest stages of a virus that will forever change the world as we know it. Lou argues that the coronavirus outbreak will have a far greater impact than SARS, for example, simply because China is now many more times integrated with the increasingly interconnected world. Over decades, globalization has crafted a world painfully sensitive and susceptible to shocks such as this pandemic. A crisis like it has thus been long overdue—and we have yet to see it unfold fully. In our integrated world, events that may previously be isolated now ripple farther and wider and in ways we do not expect and cannot foresee. We have not seen the worst, and if and when we outlast this pandemic, nothing will ever be the same. Decisions now—or indecisions—will shape and define the world for decades. These ideas are fleshed out through the virus's spawning and how it spread, the unprecedented measures to contain it and an examination of past pandemics and other crises and how they shaped the world—and an argument for why this one's different. Lou shows how drastically the virus has transformed the world and charts the greater and more radical shifts to come. His ideas and arguments are framed around his unintentionally tumultuous journey around the world, whose path the virus seemed to follow until he landed safely in quarantine in a small town in Germany, where he was able to take stock and start telling his story.

toronto notes 2023: Bayesian Learning for Neural Networks Radford M. Neal, 2012-12-06 Artificial neural networks are widely used as flexible models for classification and regression applications, but questions remain about how the power of these models can be safely exploited when training data is limited. This book demonstrates how Bayesian methods allow complex neural network models to be used without fear of the overfitting that can occur with traditional training methods. Insight into the nature of these complex Bayesian models is provided by a theoretical investigation of the priors over functions that underlie them. A practical implementation of Bayesian neural network learning using Markov chain Monte Carlo methods is also described, and software for it is freely available over the Internet. Presupposing only basic knowledge of probability and statistics, this book should be of interest to researchers in statistics, engineering, and artificial intelligence.

toronto notes 2023: Notes from Exile Clive Doucet, 1999 What it means to be a people without a nation is one of the more haunting problems of our times. In the twentieth century, this has been an immense issue for Jews, for the Romanies, and for African-Americans; it has been a question for Acadians for more than 350 years. In 1755, in retribution for their refusal to bear arms, all Acadians were deported from their homeland around the Bay of Fundy in what is today Canada's Maritime region. Ever since, they have worked hard to keep a sense of their identity as Acadians, no matter whether they lived in New Brunswick or Louisiana, Nova Scotia or Texas. Clive Doucet has wrestled with the question of Acadian identity since his childhood, when he spent some unforgettable summers with his paternal grandparents in an Acadian village in Nova Scotia and

others with his maternal grandparents in London, England. In 1994, he joined with a quarter of a million other Acadians in their first ever reunion as a people, in New Brunswick, Canada. It inspired him to write *Notes from Exile*, which is in part a charming story of his childhood holidays, a heartwarming account of *les Retrouvailles*, and an eye-opening history of the Acadians, woven into a whole by a thoughtful, challenging consideration of what it means to be Acadian in a world without Acadie.

toronto notes 2023: Speaking the Truth about Oneself Michel Foucault, 2021-10-07 Speaking the Truth about Oneself is composed of lectures that acclaimed French philosopher Michel Foucault delivered in 1982 at the University of Toronto. As is characteristic of his later work, he is concerned here with the care and cultivation of the self, which becomes the central theme of the second and third volumes of his famous History of Sexuality, published in French in 1984, the month of his death, and which are explored here in a striking and typically illuminating fashion. Throughout his career, Foucault had always been interested in the question of how constellations of knowledge and power produce and constitute subjects. But in the last phase of his life, he became especially interested not only in how subjects are constituted by outside forces but in how they constitute themselves. In this lecture series and accompanying seminar, we find Foucault focused on antiquity, starting with classical Greece, the early Roman dynasties, and concluding with fourth- and fifth-century Christian monasticism. Foucault's claim is that, in these periods, we see the development of a new kind of act-speaking the truth (about oneself)-as the locus of a new form of subjectivity, which he deemed important not just for historical reasons but also as something modernity could harness anew or adapt to its own purposes--

toronto notes 2023: Complications Atul Gawande, 2003-04-01 A brilliant and courageous doctor reveals, in gripping accounts of true cases, the power and limits of modern medicine. Sometimes in medicine the only way to know what is truly going on in a patient is to operate, to look inside with one's own eyes. This book is exploratory surgery on medicine itself, laying bare a science not in its idealized form but as it actually is -- complicated, perplexing, and profoundly human. Atul

Gawande offers an unflinching view from the scalpel's edge, where science is ambiguous, information is limited, the stakes are high, yet decisions must be made. In dramatic and revealing stories of patients and doctors, he explores how deadly mistakes occur and why good surgeons go bad. He also shows us what happens when medicine comes up against the inexplicable: an architect with incapacitating back pain for which there is no physical cause; a young woman with nausea that won't go away; a television newscaster whose blushing is so severe that she cannot do her job. Gawande offers a richly detailed portrait of the people and the science, even as he tackles the paradoxes and imperfections inherent in caring for human lives. At once tough-minded and humane, *Complications* is a new kind of medical writing, nuanced and lucid, unafraid to confront the conflicts and uncertainties that lie at the heart of modern medicine, yet always alive to the possibilities of wisdom in this extraordinary endeavor. *Complications* is a 2002 National Book Award Finalist for Nonfiction.

toronto notes 2023: *Probability and Statistics* Michael J. Evans, Jeffrey S. Rosenthal, 2004 Unlike traditional introductory math/stat textbooks, *Probability and Statistics: The Science of Uncertainty* brings a modern flavor based on incorporating the computer to the course and an integrated approach to inference. From the start the book integrates simulations into its theoretical coverage, and emphasizes the use of computer-powered computation throughout.* Math and science majors with just one year of calculus can use this text and experience a refreshing blend of applications and theory that goes beyond merely mastering the technicalities. They'll get a thorough grounding in probability theory, and go beyond that to the theory of statistical inference and its applications. An integrated approach to inference is presented that includes the frequency approach as well as Bayesian methodology. Bayesian inference is developed as a logical extension of likelihood methods. A separate chapter is devoted to the important topic of model checking and this is applied in the context of the standard applied statistical techniques. Examples of data analyses using real-world data are presented throughout the text. A final chapter introduces a number of the most important stochastic process models using elementary methods. *Note: An appendix in the book contains Minitab code for more involved computations. The code can be used by students as templates for their own calculations. If a software package like Minitab is used with the course then no programming is required by the students.

toronto notes 2023: *Field Notes from an Unintentional Birder* Julia Zarankin, 2020-09-12 When Julia Zarankin saw her first red-winged blackbird at the age of thirty-five, she didn't expect that it would change her life. Recently divorced and auditioning hobbies during a stressful career transition, she stumbled on birdwatching, initially out of curiosity for the strange breed of humans who wear multi-pocketed vests, carry spotting scopes and discuss the finer points of optics with disturbing fervour. What she never could have predicted was that she would become one of them. Not only would she come to identify proudly as a birder, but birding would ultimately lead her to find love, uncover a new language and lay down her roots. *Field Notes from an Unintentional Birder* tells the story of finding meaning in midlife through birds. The book follows the peregrinations of a narrator who learns more from birds than she ever anticipated, as she begins to realize that she

herself is a migratory species: born in the former Soviet Union, growing up in Vancouver and Toronto, studying and working in the United States and living in Paris. Coming from a Russian immigrant family of concert pianists who believed that the outdoors were for “other people,” Julia Zarankin recounts the challenges and joys of unexpectedly discovering one’s wild side and finding one’s tribe in the unlikely of places. Zarankin’s thoughtful and witty anecdotes illuminate the joyful experience of a new discovery and the surprising pleasure to be found while standing still on the edge of a lake at six a.m. In addition to confirmed nature enthusiasts, this book will appeal to readers of literary memoir, offering keen insight on what it takes to find one’s place in the world.

toronto notes 2023: Lecture Notes: Clinical Medicine David Rubenstein, D. Wayne, John R. Bradley, 2003-01-27 *Lecture Notes on Clinical Medicine* has a long-standing reputation for excellence and is a must-have in the run-up to final examinations and throughout the clinical years. It offers a concise summary of the essential information needed for practising clinical medicine. The book is divided into two sections: Part 1 focuses on the clinical examination of each body system, and Part 2 summarises the core knowledge required for the understanding of specific diseases relevant to each body system. The key to the book's success lies in the first part which is structured and styled very much in the manner of a manual on techniques of physical examination. The book helps the examination candidates carry out an examiner's request to perform a specific examination and hence is an excellent preparation tool for OSCEs. Description of the clinical approach is built around the questions most commonly asked and is designed to get medical students to work systematically as if they have been practising medicine for years. The second part of the book is a short textbook of medicine: a summary of basic clinical facts, organised by body system, and under the usual headings of clinical presentation, investigation and management.

"I wanted to write about silences and terror and acts that hover over generations, over centuries. I began by writing about my mother and grandmother." —from "Note 18" in Ordinary Notes A singular achievement, Ordinary Notes explores with immense care profound questions about loss, and the shapes of Black life that emerge in the wake. In a series of 248 brief and urgent notes that gather meaning as we read them, Christina Sharpe skillfully weaves artifacts from the past—public ones alongside others that are poignantly personal—with present-day realities and possible futures, intricately constructing an immersive portrait of everyday Black existence. Through the striking images and words in these pages, themes and tones echo: sometimes about life, art, language, beauty, memory; sometimes about history, photography, and literature—but always attending, with exquisite care, to the ordinary-extraordinary dimensions of Black life. At the heart of Ordinary Notes is the indelible presence of the author's mother, Ida Wright Sharpe. "I learned to see in my mother's house," writes Sharpe. "I learned how not to see in my mother's house . . . My mother gifted me a love of beauty, a love of words." Using these and other gifts and ways of seeing, Sharpe steadily summons a chorus of voices and experiences to become present on the page. She articulates and follows an aesthetic of beauty as a method," collects entries from a community of thinkers towards a "Dictionary of Untranslatable Blackness," and rigorously examines sites of memory and memorial. And in the process, she forges a new literary form, as multivalent as the ways of Black being it traces.

toronto notes 2023: Condoland James T. White, John Punter, 2023-05-31 Condoland casts CityPlace - a massive residential development of more than thirty condominium towers just outside Toronto's downtown core - as a microcosm of twenty-first-century urban intensification that has transformed the city skyline beyond all recognition. Built almost entirely by a single private developer, this immense neighbourhood took decades to plan, design, and develop, but the end result lacks a sense of place and is not widely accessible to those who need homes: only a small number of its 13,000 units constitute affordable housing, and public amenities are limited. James T. White and John Punter journey through the forty-year development of Toronto's largest residential megaproject, focusing on its urban design and architectural evolution. They also delve into the background, summarizing the tools used to shape Toronto's built environment, and critically explore the underlying political economy of planning and real estate development in the city. Using detailed field studies, interviews, archival research, and with nearly two hundred illustrations, they reveal an

alarmingly flexible approach to planning and design that is acquiescent to the demands of a rapacious development industry. Condoland raises key questions about the sustainability and long-term resilience of city planning.
