behind the sce: Music Scenes Andy Bennett, Richard A. Peterson, 2004 While more than 80 percent of the world's commercial music is controlled by four multinational firms, most music is made and enjoyed in diverse situations divorced from such corporate behemoths. These fourteen original essays examine the fascinating world of music scenes, those largely inconspicuous sites where clusters of musicians, producers, and fans explore their common musical tastes and distinctive lifestyle choices. Although most music scenes come and go with hardly a trace, they nevertheless give immense satisfaction to their participants, and a few - New York bop jazz, Merseybeat, Memphis rockabilly, London punk, Bronx hip-hop - achieve fame and spur musical innovations. To date, serious study of the scenes phenomenon has focused mainly on specific music scenes while paying less attention to recurrent dynamics of scene life, such as how individuals construct and negotiate scenes to the various activities. This volume remedies that neglect. The editors distinguish between three types of scenes - local, translocal, and virtual - which provide the organizing framework for the essays. Aspects of local scenes, which are confined to specific areas, are explored through essays on Chicago blues, rave, karaoke, teen pop, and salsa. The section on translocal scenes, which involve the coming together of scattered local scenes around a particular type of music and lifestyle, includes articles on Riot Grrrls, goths, art music, and anarcho-punk. Aspects of virtual scenes, in which fans communicate via the internet, are illustrated using alternative country, the Canterbury sound, postrock, and Kate Bush fans. Also included is an essay that shows how the social conditions in places where jazz was made influenced that music's development.

It is a story of a close working relationship and collaboration with a master. Avedon: Behind the Scenes, 1964-1980 relates Lewin's personal experiences working with Richard Avedon for 16 years. It is about the hard work, the intrigues, the energy, the mysteries, the humor, and the commitment to creating images that were larger-than-life and will last for generations. This book illuminates many details about preparations for Avedon's major exhibitions, the master classes he was a part of, and many behind-the-scenes stories working on fashion collections in Paris and in New York for Harper's Bazaar and Vogue, photographing the world's most famous personalities and most beautiful women: Sophia Loren, Audrey Hepburn, Catherine Deneuve, Cher, Jean Shrimpton, Veruschka, Twiggy, Rene Russo, Patti Hansen, and Lauren Hutton. Finally, this book opens a window on the lighter side of Richard Avedon, as well as his total dedication to the art of photography in his determination to leave a legacy unlike that of any other photographer. behind the sce: Harbinger David Mack, 2012-09-18 Imagine Alias combined with Star Trek and you have the idea behind for VANGUARD, a new concept for Star Trek fiction that takes it in a compelling new direction, presenting a new perspective on the classic Original Series era, with novels running parallel to Kirk's original five-year mission. VANGUARD is a Starfleet space station charged with the exploration and colonization of a region of space that holds a highly coveted, mysterious, and potentially cataclysmic secret - one that the Federation must solve before anyone else. The race is on and at the centre of this intrigue is an eclectic mix of Starfleet and civilian protagonists unlike any crew previously seen in Star Trek. Their turbulent lives aboard the station and on the ships they travel are painted against the backdrop of an evolving storyline that will gain momentum as the series progresses and the layers of ancient mystery are steadily peeled back, one after another.

behind the sce: Toward Detonation Theory Anatoly N. Dremin, 2012-12-06 It is known that the Chapman-Jouguet theory of detonation is based on the assumption of an instantaneous and complete transformation of explosives into detonation products in the wave front. Therefore, one should not expect from the theory any interpretations of the detonation limits, such as shock initiation of detonation and kinetic instability and propagation (failure diameter). The Zeldovich-Von Neuman-Doring (ZND) theory of detonation appeared, in fact, as a response to the need for a theory capable of interpreting such limits, and the ZND detonation theory gave qualitative interpretations to the detonation limits. These interpretations were based essentially on the theoretical notion that the mechanism of explosives transformation at detonation is a combustion of a layer of finite

thickness of shock-compressed explosive behind the wave shock front with the velocity of the front. However, some experimental findings turned out to be inconsistent with the theory. A very small change of homogeneous (liquid) explosives detonation velocity with explosive charge diameter near the rather sizable failure diameter is one of the findings. The elucidation of the nature of this finding has led to the discovery of a new phenomenon. This phenomenon has come to be known as the breakdown (BD) of the explosive self-ignition behind the front of shock waves under the effect of rarefaction waves.

This TCLEE Monograph studies seven large lifeline organizations that have undertaken significant seismic improvement programs. In spite of often-cited barriers to natural hazards risk reduction, these organizations demonstrate a variety of ways to start and sustain risk-reduction programs. In these economically and politically robust organizations, top-level managers and high-level inside technical seismic advocates learned from the damage done by past earthquakes to their systems or similar systems and from research and educational programs. Then, each group developed an overall view of its system's earthquake vulnerabilities and devised adaptable, incremental seismic implementation programs.

behind the sce: Howard Thurman and the Disinherited Paul Harvey, 2020-10-27 The faith journeys of a major mentor to the civil rights movement Teacher. Minister. Theologian. Writer. Mystic. Activist. No single label can capture the multiplicity of Howard Thurman's life, but his influence is evident in the most significant aspects of the civil rights movement. In 1936, he visited Mahatma Gandhi in India and subsequently brought Gandhi's concept of nonviolent resistance across the globe to the United States. Later, through his book *Jesus and the Disinherited*, he foresaw a theology of American liberation based on the life of Jesus as a dispossessed Jew under Roman rule. Paul Harvey's biography of Thurman speaks to the manifold ways this mystic theologian and social activist sought to transform the world to better reflect "that which is God in us," despite growing up in the South during the ugliest years of Jim Crow. After founding one of the first intentionally interracial churches in the country—the Church for the Fellowship of All Peoples in San Francisco—he shifted into a mentorship role with Martin Luther King Jr. and other civil rights leaders. He advised them to incorporate more inward seeking and rest into their activism, while also recasting their struggle for racial equality in a more cosmopolitan, universalist manner. As racial justice once again comes to the forefront of American consciousness, Howard Thurman's faith and life have much to say to a new generation of the disinherited and all those who march alongside them.
