carf manual: The Multidisciplinary Pain Center Jawahar N. Ghia, 2012-12-06 The pain center/clinic is in the stage of transition. It has come a long way since chronic pain was a nonexistent entity and patients with difficult pain problems did not receive well-deserved attention or were lost in the busy practices of various specialty clinics. Thirty-five years ahead of the rest of us, John. Bonica was the first physician who had a clear vision of a pain center's potential. Twenty years later, in response to loud public demands for relief of chronic pain, this idea was put into practice by a number of others on a somewhat larger scale. A team of specialists from various disciplines, trained in the management of chronic pain, now offer approaches ranging from simple outpatient care to inpatient hospitalization for comprehensive care including drug detoxification, behavior modification, and total rehabilitation of these patients. Hospitals have entered this arena with renewed enthusiasm. The pain center/clinic is now an established, accepted, and expanding method of providing care for chronic pain patients. The chapters in this book are based on examples of multidisciplinary projects that deal comprehensively with management of chronic pain. Aimed primarily at the pain center/clinic in the university hospital setting, this book ranges from historical perspectives to current pain centers with their less orthodox methods of relieving chronic pain to the future of algology as a specialty.

carf manual: Trauma Informatics Kimball I. Maull, Jeffrey S. Augenstein, 2012-12-06 Information and the technology to rapidly transmit, analyze, document, and disperse this information are increasing arithmetically, if not logarithmically. Arguably, no discipline better exemplifies this trend than medicine. It can be further argued that care of the trauma patient is one of the better examples of informatics and the potential benefit to the health professionals who care for these patients. Maull and Augenstein have provided us with a primer on informatics and its use in trauma care. The subject matter is timely and covers the gamut of trauma care from prehospital to rehabilitation. Who will benefit from trauma informatics? A simple answer would be anyone who takes care of trauma patients. From a broader perspective, however, at least three examples illustrate how trauma informatics can be used today to exert a positive effect on patient outcome. The first example is care of combat casualties, including battlefield resuscitation, evacuation, acute care, and ultimate return to the continental United States. Current technology is such that via global positioning satellite, a corpsman could transmit to a remote area the vital signs and pertinent physical findings of a combat casualty. Furthermore, the location of the corpsman and the casualty would be precisely known, and consultation and destination disposition would be possible. The injured person, when admitted to a combat support hospital, could be continuously monitored and additional remote consultation obtained.

Each profession or discipline has its own terminology; nowadays one must be

conversant with all of them. In this comprehensive dictionary Mary Lindsey has brought together terms and concepts from a wide variety of fields. Approximately 2,400 entries are included, ranging in length from concise explanations to encyclopaedic essays, but always expressed in clear, simple language. Where appropriate, suggestions for further reading are made and possible sources of further information given. An extensive system of cross-references leads the interested reader further and makes valuable connections between entries. The medical aspects of mental handicap, its causes, prognoses and treatments, are of course covered in detail. But although the cause of mental handicap may be medical, subsequent interventions may be sociological, psychological, educational, medical, paramedical or psychiatric. This is reflected in the choice of entries, making the Dictionary an invaluable source of reference for all those involved with mentally handicapped people in any capacity whatsoever.

carf manual: Radio History Spurgeon G. "Spud" Roscoe VE1BC, 2022-04-29 In this sweeping history, author Spurgeon G. Roscoe takes a look at the world of amateur radio in North America and the special role the Halifax Amateur Radio Club (HARC), of which he is a member, played in it, from the time of the World Wars all the way to the present day. Roscoe presents an account that is at once intimate and wide-ranging, covering topics from amateur radio's role on the Canadian ships of the 1920s and '30s and during wartime to the involvement of women in the craft, to the technical details of how some of the equipment involved has evolved over time, to a detailed look at the American Radio Relay League and what has appeared in the pages of its membership journal, QST, over its many years in circulation. His own deep, nearly lifelong involvement in amateur radio not only brings a deep base of knowledge to this ambitious project, but a particularly penetrating and oftentimes sentimental lens to it, too—particularly when it comes to documenting the activities of HARC and the many members who have passed in and out of it over the years. Expansive and detailed at once, Radio History: Amateur Radio is essential reading for anyone involved or interested in the hobby worldwide.
