gas turbine world handbook: Energy and Sustainability II A. Mammoli, C. A. Brebbia, 2009-06-08 The way in which our society exists, operates and develops is strongly influenced by the way in which energy is produced and consumed. No process in Industry can be performed without

sufficient supply of energy, and without Industry there can be no production of commodities on which the existence of modern Society depends. The energy systems evolved over a long period and more rapidly over the last two centuries, as a response to the requirements of Industry and Society, starting from combustion of fuels to exploiting nuclear energy and renewable resources. It is clear that the evolution of the energy systems is a continuous process, which involves constant technological development and innovation. The presentation on the Second International Conference includes: Renewable Energy Technologies; Energy Management; Energy Policies; Energy and the Environment; Energy Analysis; Energy Efficiency; Energy Storage and Management.

gas turbine world handbook: THERMAL POWER PLANT AND CO-GENERATION PLANNING -Volume II , 2010-10-05 These volumes are a component of Encyclopedia of Water Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. These volumes discuss on Large-scale power production which requires the use of heat in a thermodynamic cycle to produce mechanical work, which in turn can generate electrical energy. Substantial quantities of fuel are hence required to sustain the production of heat. Fuel may be combustible, as in the case of fossil fuels such as coal and oil, or fissionable, as in the case of nuclear fuels such as uranium. All fuels produce waste products, which must be discharged, dumped, or stored. Such products range from innocuous water vapor to hazardous nuclear waste. These volumes are aimed at the following five major target audiences: University and College Students Educators, Professional Practitioners, Research Personnel and Policy and Decision Makers
