guidebook for marines pdf: Mcdp 1-3 Tactics Department of Defense, 2017-05-22 This publication is about winning in combat. Winning requires many things: excellence in techniques, an appreciation of the enemy, exemplary leadership, battlefield judgment, and focused combat power. Yet these factors by themselves do not ensure success in battle. Many armies, both winners and losers, have possessed many or all of these attributes. When we examine closely the differences between victor and vanquished, we draw one conclusion. Success went to the armies whose leaders, senior and junior, could best focus their efforts-their skills and their resources-toward a decisive end. Their success arose not merely from excellence in techniques, procedures, and material but from their leaders' abilities to uniquely and effectively combine them. Winning in combat depends upon tactical leaders who can think creatively and act decisively.

guidebook for marines pdf: Culture General Guidebook for Military Professionals Kerry Fosher, Lauren MacKenzie, Erika Tarzi, 2019-07-19 Understanding people, whether knowing the other or knowing oneself, is not the kind of straightforward task with which military trainers and leaders are familiar. In fact, we often attempt to avoid the problem all together and look for technological solutions to human problems. This is in part a natural consequence of the U.S. military having held a decisive technical and industrial advantage on the battlefield for the past century. Yet in this advantage lies a corresponding weakness when faced with problems that cannot be solved by technology. Although our theory of war emphasizes that the human dimension of war is the most critical element, we often fail to sufficiently account for it in our training and planning. At the core of understanding people is culture, a concept that is both useful and ambiguous. In order to overcome our natural aversion to ambiguity and uncertainty, we must admit that a deliberate and persistent effort is required to develop competence in the art of understanding people through culture. This guidebook, an important step in adopting such a methodical approach to culture in operations, presents an evolutionary approach to understanding the human dimension. The concepts and skills presented here under the umbrella of Culture General provide leaders, trainers, and educators a pragmatic toolkit to prepare service members for global employment. The absolute diversity of spoken languages in the world, estimated to be around 6,900 by some methods, and cultures guarantee that no nation's military will ever be perfectly prepared to operate in foreign environments. Nonetheless, the deliberate application of Culture General knowledge and skills to specific cultures and regions will produce forces as prepared as possible to deal with the complexities of the current operating environment both as individuals and as units. We should take satisfaction in the idea that this guidebook positions us well to extend the Culture General approach more broadly across the services. Based on a solid interdisciplinary foundation and grounded in accepted social science methods, this guidebook provides a bridge to more effective operations across the range of military operations.

guidebook for marines pdf: Urban Operations Department of the Army, 2014-03-28 Doctrine provides a military organization with a common philosophy, a language, a purpose, and unity of effort. Rather than establishing a set of hard and fast rules, the objective of doctrine is to foster initiative and creative thinking. To this end, FM 3-06 discusses major Army operations in an urban environment. This environment, consisting of complex terrain, a concentrated population, and an infrastructure of systems, is an operational environment in which Army forces will operate. In the future, it may be the predominant operational environment. Each urban operation is unique and will differ because of the multitude of combinations presented by the threat, the urban area itself, the major operation of which it may be part (or the focus), and the fluidity of societal and geopolitical considerations. Therefore, there will always exist an innate tension between Army doctrine, the actual context of the urban operation, and future realities. Commanders must strike the proper balance between maintaining the capability to respond to current threats and preparing for future challenges.
