issa 612 cleaning times pdf: The Urban Rail Development Handbook Daniel Pulido, Georges Darido, Ramon Munoz-Raskin, Joanna Moody, 2018-09-11 Cities across the globe are looking to develop affordable, environmentally friendly, and socially responsible transportation solutions that can meet the accessibility needs of expanding metropolitan populations and support future economic and urban development. When appropriately planned and properly implemented as part of a larger public transportation network, urban rail systems can provide rapid mobility and vital access to city centers from surrounding districts. High-performing urban rail services, when carefully approached as development projects, can help enhance quality of life by giving citizens access to employment opportunities, essential services, urban amenities, and neighboring communities. The purpose of this Handbook is to synthesize and disseminate knowledge to inform the planning, implementation, and operations of urban rail projects with a view towards: -- Emphasizing the need for early studies and project planning; -- Making projects more sustainable (economically, socially, and environmentally); -- Improving socioeconomic returns and access to opportunities for users; -- Maximizing the value of private participation, where appropriate; and -- Building capacity within project implementing and managing institutions This Handbook provides experiential advice to tackle the technical, institutional, and financial challenges faced by decision makers considering urban rail projects. It

brings together the expertise of World Bank staff and the input of numerous specialists to synthesize international 'good practices' and recommendations that are independent of commercial, financial political, or other interests. The material presented is intended as an honest-broker guide to maximize the impact and manage the challenges of urban rail systems in cities in both developed and developing countries. Rather than identify a single approach, this Handbook acknowledges the complexities and context necessary when approaching an urban rail development by helping to prepare decision makers to ask the right questions, consider the key issues, perform the necessary studies, apply adequate tools, and learn from international good practice all at the right time in the project development process.

issa 612 cleaning times pdf: The Birth of the Palestinian Refugee Problem, 1947-1949

Benny Morris, 1989-02-24 This book is the first full-length study of the birth of the Palestinian refugee problem. Based on recently declassified Israeli, British and American state and party political papers and on hitherto untapped private papers, it traces the stages of the 1947-9 exodus against the backdrop of the first Arab-Israeli war and analyses the varied causes of the flight. The Jewish and Arab decision-making involved, on national and local levels, military and political, is described and explained, as is the crystallisation of Israel's decision to bar a refugee repatriation. The subsequent fate of the abandoned Arab villages, lands and urban neighbourhoods is examined. The study looks at the international context of the war and the exodus, and describes the political battle over the refugees' fate, which effectively ended with the deadlock at Lausanne in summer 1949. Throughout the book attempts to describe what happened rather than what successive generations of Israeli and Arab propagandists have said happened, and to explain the motives of the protagonists.

issa 612 cleaning times pdf: Bioterrorism and Biocrimes W. Seth Carus, Center for Counterproliferation Research, 2002 The working paper is divided into two main parts. The first part is a descriptive analysis of the illicit use of biological agents by criminals and terrorists. It draws on a series of case studies documented in the second part. The case studies describe every instance identifiable in open source materials in which a perpetrator used, acquired, or threatened to use a biological agent. While the inventory of cases is clearly incomplete, it provides an empirical basis for addressing a number of important questions relating to both biocrimes and bioterrorism. This material should enable policymakers concerned with bioterrorism to make more informed decisions. In the course of this project, the author has researched over 270 alleged cases involving biological agents. This includes all incidents found in open sources that allegedly occurred during the 20th Century. While the list is certainly not complete, it provides the most comprehensive existing unclassified coverage of instances of illicit use of biological agents.

issa 612 cleaning times pdf: Global Guidelines for the Prevention of Surgical Site Infection World Health Organization, 2017-01-27 Surgical site infections are caused by bacteria that get in through incisions made during surgery. They threaten the lives of millions of patients each year and contribute to the spread of antibiotic resistance. In low- and middle-income countries, 11% of patients who undergo surgery are infected in the process. In Africa, up to 20% of women who have a caesarean section contract a wound infection, compromising their own health and their ability to care for their babies. But surgical site infections are not just a problem for poor countries.

In the United States, they contribute to patients spending more than 400 000 extra days in hospital at a cost of an additional US \$10 billion per year. No international evidence-based guidelines had previously been available before WHO launched its global guidelines on the prevention of surgical site infection on 3 November 2016, and there are inconsistencies in the interpretation of evidence and recommendations in existing national guidelines. These new WHO guidelines are valid for any country and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.

issa 612 cleaning times pdf: Bashō's Journey Matsuo Bashō, 2010-03-29 In Bashō's Journey, David Landis Barnhill provides the definitive translation of Matsuo Bashō's literary prose, as well as a companion piece to his previous translation, Bashō's Haiku. One of the world's greatest nature writers, Bashō (1644–1694) is well known for his subtle sensitivity to the natural world, and his writings have influenced contemporary American environmental writers such as Gretel Ehrlich, John Elder, and Gary Snyder. This volume concentrates on Bashō's travel journal, literary diary (Saga Diary), and haibun. The premiere form of literary prose in medieval Japan, the travel journal described the uncertainty and occasional humor of traveling, appreciations of nature, and encounters with areas rich in cultural history. Haiku poetry often accompanied the prose. The literary diary also had a long history, with a format similar to the travel journal but with a focus on the place where the poet was living. Bashō was the first master of haibun, short poetic prose sketches that usually included haiku. As he did in Bashō's Haiku, Barnhill arranges the work chronologically in order to show Bashō's development as a writer. These accessible translations capture the spirit of the original Japanese prose, permitting the nature images to hint at the deeper meaning in the work. Barnhill's introduction presents an overview of Bashō's prose and discusses the significance of nature in this literary form, while also noting Bashō's significance to

contemporary American literature and environmental thought. Excellent notes clearly annotate the translations.

issa 612 cleaning times pdf: *Dragonfly Nymphs of North America* Kenneth J. Tennessen, 2019-03-11 This monograph is the first of its kind devoted entirely to the dragonfly nymphs of North America north of Mexico, the focus being accurate identification of the 330 species of Anisoptera that occur in the region. Nymphal external morphology is described and illustrated in detail, and all terms needed to navigate the dichotomous keys are defined. Species are tabulated with references that provide the most detailed, accurate descriptions for each; species that are inadequately described are so indicated. The key separating the seven families in the region contains several new characters. The families are then covered separately: Aeshnidae (13 genera), Gomphidae (17 genera), Petaluridae (2 genera), Cordulegastridae (2 genera), Macromiidae (2 genera), Corduliidae (7 genera), and Libellulidae (29 genera). Each family is further characterized, followed by a generic key. A drawing of the habitus and diagnostic details for each genus are provided, along with additional diagnostic remarks and notes on habitat and life cycle; for each genus, a map shows its geographic distribution in North America. Full-grown nymphs of all known species of each genus are keyed and diagnosed; characters that apply to earlier instars are noted. Morphological variation in character states was analyzed in order to assess the reliability of previously utilized characters and to discover new characters. Most of the characters used to distinguish all levels of taxa are illustrated; a total of 702 figures, comprising 1,800 original drawings, along with selected photographs where necessary for clarity, accompany the keys. Measurements of total length, head

width, and other variables for each species are provided in tables. Difficulties with past keys and descriptions, including errors, omissions and other shortcomings, are addressed. The importance of nymph characters in helping solve generic and specific distinctions and their role in phylogenetic studies is emphasized. Methods for collecting, rearing, and preserving dragonfly nymphs and exuviae are presented. The final chapter discusses research opportunities on North American Anisoptera nymphs, including taxonomic needs, studies on structure and function, life history and microhabitat, water quality indices and conservation efforts. The habitus drawings of all genera are arranged according to family in five plates (Appendix I); although the book is intended as a lab manual, these plates conveniently allow for comparison based on nymph shape making field identification to genus possible in many cases. Appendix II contains a brief history of dragonfly nymph studies in North America. A glossary and an index to scientific names are included.

issa 612 cleaning times pdf: Social and Economic Dimensions of Carrageenan Seaweed Farming Diego Valderrama, Junning Cai, Nathanaël Hishamunda, Neil B. Ridler, 2013 Carrageenan is a gelling agent extracted from red seaweeds and it has multiple applications in the food processing and other industries. Increasing demand for carrageenan has led to rapid expansion of carrageenan seaweed (primarily *Kappaphycus* and *Eucheuma*) farming in tropical areas. This expansion is expected to continue, but many issues need to be addressed to enable the sector to develop its full potential in contributing towards sustainable livelihoods, human development and social well-being. Including six country case studies and a global synthesis, this document provides a comprehensive and balanced assessment of the economic, social and governance dimensions of carrageenan seaweed farming. Information and insights provided by this document should facilitate evidence-based decision-makings in both the public and private sectors.

Managers, owners, companies, and scientists are using professional drones equipped with high-resolution visible, multispectral, or thermal cameras to assess the state of ecosystems, the effect of disturbances, or the dynamics and changes within biological communities inter alia. We are now at a tipping point on the use of drones for these type of applications over natural areas. UAV missions are increasing but most of them are testing applicability. It is time now to move to frequent revisiting missions, aiding in the retrieval of important biophysical parameters in ecosystems or mapping species distributions. This Special Issue shows UAV applications contributing to a better understanding of biodiversity and ecosystem status, threats, changes, and trends. It documents the enhancement of knowledge in ecological integrity parameters mapping, long-term ecological monitoring based on drones, mapping of alien species spread and distribution, upscaling ecological variables from drone to satellite images: methods and approaches, rapid risk and disturbance assessment using drones, mapping albedo with UAVs, wildlife tracking, bird colony and chimpanzee nest mapping, habitat mapping and monitoring, and a review on drones for conservation in protected areas.

issa 612 cleaning times pdf: The Lives of Campus Custodians Peter Mark Magolda, 2023 This unique study uncovers the lives and working conditions of a group of individuals who are usually rendered invisible on college campuses--the custodians who daily clean the offices, residence halls, bathrooms and public spaces. In doing so it also reveals universities' equally invisible practices that frequently contradict their espoused values of inclusion and equity, and their profession that those on the margins are important members of the campus community. This vivid ethnography is the fruit of the year's fieldwork that Peter Magolda's undertook at two universities. His purpose was to shine a light on a subculture that neither decision-makers nor campus community members know very much about, let alone understand the motivations and aspirations of those who perform this work; and to pose fundamental questions about the moral implications of the corporatization of higher education and its impact on its lowest paid and most vulnerable employees. Working alongside and learning about the lives of over thirty janitorial staff, Peter Magolda becomes privy to acts of

courage, resilience, and inspiration, as well as witness to their work ethic, and to instances of intolerance, inequity, and injustices. We learn the stories of remarkable people, and about their daily concerns, their fears and contributions. Peter Magolda raises such questions as: Does the academy still believe wisdom is exclusive to particular professions or classes of people? Are universities really inclusive? Is addressing service workers' concerns part of the mission of higher education? If universities profess to value education, why make it difficult for those on the margins, such as custodians, to get educated. The book concludes with the research participants' and the author's reflections about ways that colleges can improve the lives of those whose underpaid and unremarked labor is so essential to the smooth running of their campuses. Appendices provide information about the research methodology and methods, as well as a discussion of the influence of corporate managerialism on ethnographic research.
